

EPTIFIBATIDE injection, for intravenous use

Initial U.S. Approval: 1998

Note: the content below do not include all the information needed to use Eptifibatide injection safely and effectively. Please read the package insert carefully and follow the doctors' instructions before use the product.

-----**INDICATIONS AND USAGE**-----

Eptifibatide injection is a platelet aggregation inhibitor indicated for:

- Treatment of acute coronary syndrome (ACS) managed medically or with percutaneous coronary intervention (PCI).
- Treatment of patients undergoing PCI (including intracoronary stenting).

-----**DOSAGE AND ADMINISTRATION**-----

- ACS or PCI: 180 mcg/kg IV bolus as soon as possible after diagnosis followed by infusion at 2 mcg/kg/min.
- PCI: Add a second 180 mcg/kg bolus at 10 minutes.
- In patients with creatinine clearance less than 50 mL/min, reduce the infusion to 1 mcg/kg/min.

-----**DOSAGE FORMS AND STRENGTHS**-----

- 20 mg/10 mL (2 mg/mL) in a single-dose vial for bolus injection.
